

## Y-M 系列

# 隔膜压力表

### Y-M Series

### diaphragm-seal pressure gauge

#### 概述

为使通用型压力表能适用于测量强腐蚀、高温、高粘度、易结晶、易凝固、有固体浮游物的介质压力以及必须避免测量介质直接进入通用型压力仪表和防止沉淀物积聚且易清洗的场合，应采用由隔膜隔离器与通用型压力仪表组成一个系统的隔膜表。隔膜表主要用于石油化工、制碱、化纤、染化、制药、食品和制造等工业部门生产过程中测量流体介压力之用。

#### 结构原理

当测量介质的压力  $P$  作用于隔膜，则隔膜产生变形，压缩压力仪表测压系统的密封液，使其形成  $P - \Delta P$  的压力差。当隔膜的刚性足够小时，则  $\Delta P$  也很小，压力仪表测用系统形成的压力就近于测量介质的压力。

#### 法兰及密封液选择

法兰通常采用 HGJ(化工部)标准也可采用其他国家标准，根据用户需要可特殊订货。  
为保证隔膜表使用可靠性和安全性，应根据不同用途选择合适的密封液。

#### Description

In order to make the universal pressure gauge suited for measuring the pressure of media with strong corrosion、high temperature、high viscosity、easy crystal、easy to condense and solid flowing matter，and must avoid the measuring media directly into the universal pressure instrument and prevent the diaphragm gaugeThe diaphragm gauge is mainly used for measuring the pressure of fluid media during the manufacturing process of industries such as petroleum and chemical，base-making，chemical fiber，dye，Dharmaceutical and etc.

#### Structural principle

When the pressure  $P$  of measuring media acts on diaphragm.then the diaphragm will buckle，and compresses the sealed liquid of measuring system of pressure instrument for the purpose of producing the pressure difference  $P - \Delta P$ .When the hardness of diaphragm is small enough. then  $\Delta P$  is also small，and the pressure developed by the measuring system of the pressure instrument is approximately close to that of measuring media .

#### Selection of flange and sealing liquid

Flange can not only adopt HGJ standard(chemical department)，but also able to adopt other national standard.Special order can be available according to customers requirements .  
Select proper sealing liquid according to different uses so as to ensure reliable and safe use of the diaphragm pressure gauge .

## Y-M 系列 卫生隔膜压力表

Y-M Series  
 sanitary diaphragm-seal pressure gauge

### 概述

Y-M 系列卫生隔膜压力表具有装拆快捷方便、易于清洗、不易污染、清洁美观、安全可靠等优点。并满足药品生产质量规范(GMP)的要求,可广泛应用于制药、食品、饮料、制酪、水处理等行业。

### Description

Series Y-M sanitary type diaphragm pressure gauge has the features of easy detachment, easy to clean, not easy to be polluted, clear and visualized, reliable safely, etc It satisfies the requirements of medical production quality(GMP), and widely used in industries such as Dharmaceutical, food, beverage, cheese making, water treatment, etc

### 技术参数

- 隔膜表的耐腐蚀性
- 隔膜表的耐腐蚀性可通过合适的选择与测量介质接触部分的隔膜、法兰及密封圈的材料来保证。
- 隔膜材料: 316、316L
- 法兰材料: 316、316L
- 密封圈材料: 硅橡胶、聚四氟乙稀

### Technical parameter

- Causticity of diaphragm gauge
- Wetted parts, flange and sealing ring are corrosion-proof
- Diaphragm material: 316、316L
- Flange material: 316、316L
- Material of sealed ring: silica rubber tetion

### 密封液的选择

为了保证卫生型隔膜表使用的可靠性和安全性,根据不同用途,选择合适的密封液。

### Selection Of the sealed liquid

select proper sealing liquid to ensure reliability and safety

密封液 Sealing liquid	受压部温度范围 Temp range under pressure	比重 Proportion	体膨胀 Body expansion
甘油水溶液 Glycerin	-5~100	1.27	$0.61 \times 10^{-3}$
丙二醇 Propylene glycol	-30~160	1.04	$0.70 \times 10^{-3}$
植物油 Vegetable oil	-5~100	1.93	$1.03 \times 10^{-3}$
